

Supplier Barcodes for Stock Count

Instructions:

1. Scan a supplier barcode to set the current context.
2. Scan material barcodes for each unit from that supplier.
3. To change suppliers, scan a new supplier barcode.

Note: Each scan of a material barcode will increment the count by 1 for that supplier/material combination.

Important: These barcodes use shortened IDs (first 10 chars of UUID) to make them more compact.
The full supplier name is shown for reference.
